Central Board of Gujarat

📅 2022

PROJECTS

Cold emails automations

- An email automation tool built with MERN stack that lets users create cold email campaigns with custom workflows. Users can select contacts, set email delays, and choose templates, with all emails sent automatically through Nodemailer and Agenda scheduling.

Chat-PDF

- Enhancing the LLM library Langchain, Chat-PDF is an application designed to seamlessly upload PDFs, receive precise answers. Efficient, user-friendly, indispensable.

AI Powered Notification System

- Developed an webapp for accountants that sends 24-hour advance reminders via WhatsApp, using given client details and generating messages with LangChain library.

Rick and Morty Wiki

- Developed my first dynamic web app with React.js and Bootstrap, integrating a RESTful API for data fetching and adding sorting/filtering functionalities.

Webapp Twitter Clone

- Fully functional Twitter clone with user authentication, tweeting, retweeting, following, and responsive design using React.js, Node.js, MongoDB, and secure database storage.storage.

College Developers Community

- Created a network of programming communities for university students using TypeScript, Next.js (SSR), PostgreSQL, Redis, and TanStack Query for efficient error handling and notifications.
